—A PRLATE ON GEORGEISM.

Recent Agrarian Theories Characterized as a Frenzy of Imagination.

New York, Nov. 22.—Archbishop Corrigan has issued a long pastoral letter to the people of his diocese. It was read in the Roman Catholic churches Sunday morning. The remarks of the archbishop in relation to the rights of individuals to acquire and hold property are of special interest and significance. He says: "Undoubtedly God made the earth for the use of all mankind; but whether the possession thereof was to be in common, or by individual ownership, was left for reason to determine. Such determination, judging from the facts of history, the sanction of law, from the teaching of the wisest and the actions of the best and bravest of mankind, has been, and is, that man, by lawful labor, becomes possessed of the right of ownership in property, and not merely in its use. The reason is because a man is strictly entitled to that of which he is the producer, and to the improvement he brings about in it, and the enjoyment of it. It is clear that in a farm, for instance, which one has, by his own attention to it, improved in value; in a flock of marble out of which one has carved a perfect statue, he can not fully enjoy the improvement, unless the right of ownership is allowed him to enjoy the object thus improved. He has a strict right, and one that he owes to himself and to the community, to the ownership and enjoyment of it to a full compensation for the improvement which he has made. It is an argument against ownership in land by reasoning on the universal distribution of air and light is only a freak of imagination. One may deny the right of ownership, and you see the result of stagnation in human enterprise."
